

HYDROFLEX®

METAL HOSE

CONVOLUTED METAL HOSES OF
STAINLESS STEEL

PRODUCT RANGE

Our complete range of corrugated, metal braided hose includes a wide range of versatile products that can be used with chemicals, gases, and foodstuff. Furthermore, our products perform under extreme temperatures and offer features such as non-stick, anti-kink and anti-aging.

Our experienced team of engineers and master fabricators, will benefit clients from the highest standards of customer care at every level of their project. We work with customers to provide a bespoke product that meets the exact requirements demanded.

Upon customers request our company can offer products in a range of **Monel®**, **Inconel®625**, and **Hastelloy®C276**. Contact us to find out more about our bespoke solutions.

PRODUCTS

METALLIC CORRUGATED / BRAIDED HOSE

HYDROFLEX® metal corrugated braided hose is suitable for a wide range of applications where rubber hoses are not functional. In applications with high corrosive fluids and extreme temperatures, flexible metal hoses prove durable and versatile.

The most common material available are **SS316L** grade which is the ideal material in coastal and marine application by providing a better corrosion performance due to the added molybdenum in the steel. **Monel® 400** provides even a better corrosion resistance for seawater and chlorine transfer applications. For applications where continuous temperature greater than 550°C are required **Inconel®625** and **Hastelloy®C276** are particularly suitable.

Our hoses are produced according to **ISO 10380** and are able to withstand temperatures ranging between -250°C to 550°C, without any effect on pressure performance.

Due to the corrugated design of **HYDROFLEX®** metal hoses, provide enhanced anti-collapse properties that makes them ideal for submerged applications with vacuum pressure. Depending on the design and size the working pressure could range from vacuum to 800 bar.

Features

The key benefits of choosing Amnitec corrugated/braided metallic hose:

Operating Pressures

Cryogenic Applications

Temperature Range

Suitable for Gases

Long Lifespan

Meets Standards

Aggressive / Corrosive Fluids

Suitable for Liquids

STAINLESS STEEL EXPANSION JOINTS / BELLOWS

HYDROFLEX® metal stainless steel expansion joints are used in a wide range of applications. Metallic Bellows are relatively light compared to the rubber bellow alternatives available in the market. They are constructed without braiding and can withstand high pressures and temperatures as well as absorb movements in axial, lateral and angular directions.

Stainless Steel material bellows can withstand variations in temperatures from very low to as high as 600°C. Stainless steel has exceptional chemical resistance and physical strength.

HYDROFLEX® metal bellows and expansion joints are generally available in sizes of 1.1/2"(40mm) to 20"(500mm).

HYDROFLEX® Stainless Steel Bellows can be used in static and flexible applications and installed for use in places with constant vibration and flexing.

EXHAUST GASES

In flue or exhaust systems in ships applications that require higher temperature, minimal vibrations and low pressures, **HYDROFLEX®** metal bellows offers two options - Weld Ends or Flanged Ends.

HVAC

There is a vast range of Bellow and Expansion joints used in the HVAC industry. We keep several of the most common types in stock for same day delivery. Some of the common types are welding ends, female thread, press fittings or flanged or grooved ends.

STAINLESS STEEL PUMP CONNECTORS

Stainless Steel Pump connectors are most commonly used in thermal oil pipe systems to absorb vibrations. We offer them in welding ends and fixed flanged ends.

INDUSTRIES

The industries we supply include marine, refrigeration, petrochemical, cryogenic, power generation and industrial.

PETROCHEMICAL

Designed to work in conditions of high chemical resistance, our metal hose assemblies are tested for this demanding sector. Our experience in working within the Petrochemical industry, and high-performance flexible metal hose assemblies will ensure we are the supplier of choice.

MARINE

The product applications within the marine sector varies and are often extreme conditions. Our products can withstand high temperature applications, suitable for use in corrosive media, and offer anti-collapse strength.

REFRIGARATION

In both domestic and industrial sectors, we provide cost effective and reliable solution. Our products can withstand and provide exceptional performance in very low temperature conditions.

CRYOGENIC

Our products are designed to withstand conditions of cryogenic industry. Our Metal hose assemblies are ideal for conveying liquid nitrogen, liquid helium, liquid hydrogen and other cryogenic fluids.

POWER GENERATION

Our Stainless Steel Hose assemblies are not only designed for fluid transfer but also to be durable and flexible to withstand extreme conditions in the Power Generation sector.

INDUSTRIAL

Every demanding application required robust and long-lasting products. With our Flexible Hose assemblies capable of fatigue lifespan of over 35,000, our SS Metalic hose will exceed the demands of the industrial applications.

Hose-On-Reel

The working Pressure with Single / Double wire Braid is based on Braiding specification of Series 1101

Advantages of reeling

- *Braided Hose-On-Reel is segmented into a continuous length to reduce scrap
- * Convenient handling, storage and Inventory Control
- * Reduces shelf space
